

EXCERCISE 4: SNAPSHOTS ACTIVITY

1. First I create a snapshot with the empty desktop (snapshot 1).

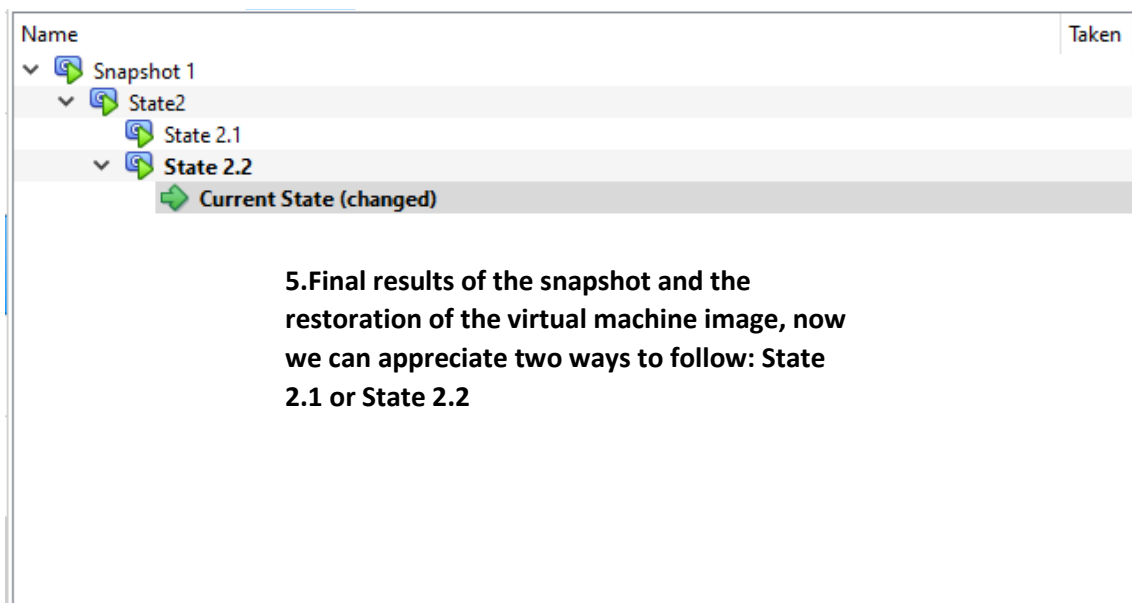

2. Then I create a folder inside and make another snapshot (State2).

3. Once I did this, I move to the Recycle Bin the folder, create another snapshot (State2.1) shut down the virtual machine and restore the estate with the snapshot.

4. Restoring the virtual machine with the State2 snapshot, so I have back the folder.

5. Final results of the snapshot and the restoration of the virtual machine image, now we can appreciate two ways to follow: State 2.1 or State 2.2
